

TEKFEN CONTRACTING GROUP

SUPPLY CHAIN POLICY

As Tekfen Contracting Group, we care about all our stakeholders, with whom we collaborate to build a sustainable future, as well as economic, environmental and social effects of the activities of our stakeholders.

In this regard, we commit to act in accordance with our company policies aiming at sustainable future, together with current laws and regulations to encourage our suppliers to operate with the same approach.

We support supply chain operations that do not only contribute to national economy, but also the social development in the geographies we operate and, in addition to the compliance principles that we have adopted to create a sustainable supply chain, we present:

- Creating an awareness for sustainable supply chain and global goals among our stakeholders,
- Evaluating our suppliers in our procurement processes by multi-dimensional and comprehensive supplier management studies based on their organizational and financial structures, national risks and sustainability performance,
- Providing feedback about their areas of development based on such evaluations and proposing collaborations / making suggestions that will contribute to their development,

as our governance commitments.

We expect from our suppliers and partners that they fully comply with

- The laws and legislations of the country, in which they operate,
- All international regulations pertaining to their fields of operation, particularly the conventions of International Labor Organization (ILO) and United Nations,
- Code of Ethics and Anti-Bribery and Corruption Policy, HSE Policy, Quality Policy, Sustainability Policy, and Information Security Policy of Tekfen Construction; and
- The criteria set forth in Supplier Standards of Tekfen Construction

without exception; and regarding their operations

- To perform studies to identify risks and opportunities and to report them in accordance with the principle of transparency,
- To minimize the consumption of raw materials and natural resources and to contribute to sustainable protection of the environment by aiming to reduce their carbon and water footprints,
- From our critical suppliers, to conduct lifecycle analyses throughout their chains of value,
- To support local economy and employment, providing support for socioeconomic development of their region,
- To perform activities for sociocultural development and promote similar activities; and
- To establish partnerships for Sustainable Development Goals

and we undertake to establish collaborations for such studies.
